Dear Madam

**COMMITMENT TO DECANT MANAGEMENT AT DA-MA COLLIERY**

As per the Geohydrologist, decant is expected to occur at the proposed horizontal Adit at Da-Ma Colliery. As per the requests made by DWS in the letter dated the 15 November 2016, an AMD Management Plan was compiled and has been attached with the updated IWWMP (version 3 submitted the 15 February 2017) as Appendix T.

The AMD management will include a decant collection system and one anaerobic wetland which will be between 1-1.5ha and cost in the vicinity of R300 000.00 for the treatment system. The treatment details are indicated in the AMD Management Plan (Appendix T).

The groundwater model will be updated every 2-3 years as mining progresses with recorded data and therefore there may be changes to the proposed Decant and Decant Management plan, which is currently based on modelled data.

This letter serves to inform DWS that Thutha Amalahle Transport and Construction (Pty) Limited commit to implementing the necessary anaerobic wetland for decant treatment at Da-Ma Colliery and will include for the financial requirements stipulated above within the next Annual Financial Liability Assessment.

Yours faithfully

A large, stylized handwritten signature in black ink, appearing to read 'M.J. Pryde', is written over the typed name.
